Exercise 3b – Wireflow Prototype Design

AIM:

The aim of this exercise is to design a wireflow prototype that demonstrates the navigation flow between different screens of a content-based application, including Article List Page, Article Page, Blog Page, Video Page, Cart, and Checkout process.

TOOLS USED:

- Wireflow (https://wireflow.co/)
- Basic UI design concepts

PROCEDURE:

Step 1: Planning the Prototype

- Identified the key screens required for the application:
  - Article List Page
  - Article Detail Page
  - Article Media Page
  - Article Page
  - Blog Page
  - Blog Video Page
  - Cart Pop-up
  - Cart Page
  - Checkout Complete Page

- Planned a logical user journey from browsing content to completing a purchase

.

Step 2: Creating Wireflow Project

- Logged into the Wireflow platform.
- Created a new project for the wireflow prototype.

Step 3: Designing Screens

1. Article List Page

- Designed a layout displaying a list of articles with image and text placeholders.
- Added navigation to Article Media Page and Article Detail Page.

2. Article Media Page

- Created a screen focused on media content related to articles.
- Linked it back to the Article List Page.

3. Article Detail Page

- Designed a detailed article view with structured text layout.
- Connected it to the Article List Page.

4. Article Page

- Designed a rich content page with images and multiple sections.
- Linked this page to Blog Pages.

5. Blog Page

- Created layouts displaying blog entries with visual elements.
- Connected to Blog Video Page.

6. Blog Video Page

- Designed a page containing video content with playback placeholder.
- Linked to Cart Pop-up and Cart Page.

7. Cart Pop-up

- Designed a pop-up interface showing selected items.
- Connected to Checkout Complete Page.

8. Cart Page

- Created a detailed cart interface with item list and options.
- Linked to Checkout Complete Page.

9. Checkout Complete Page

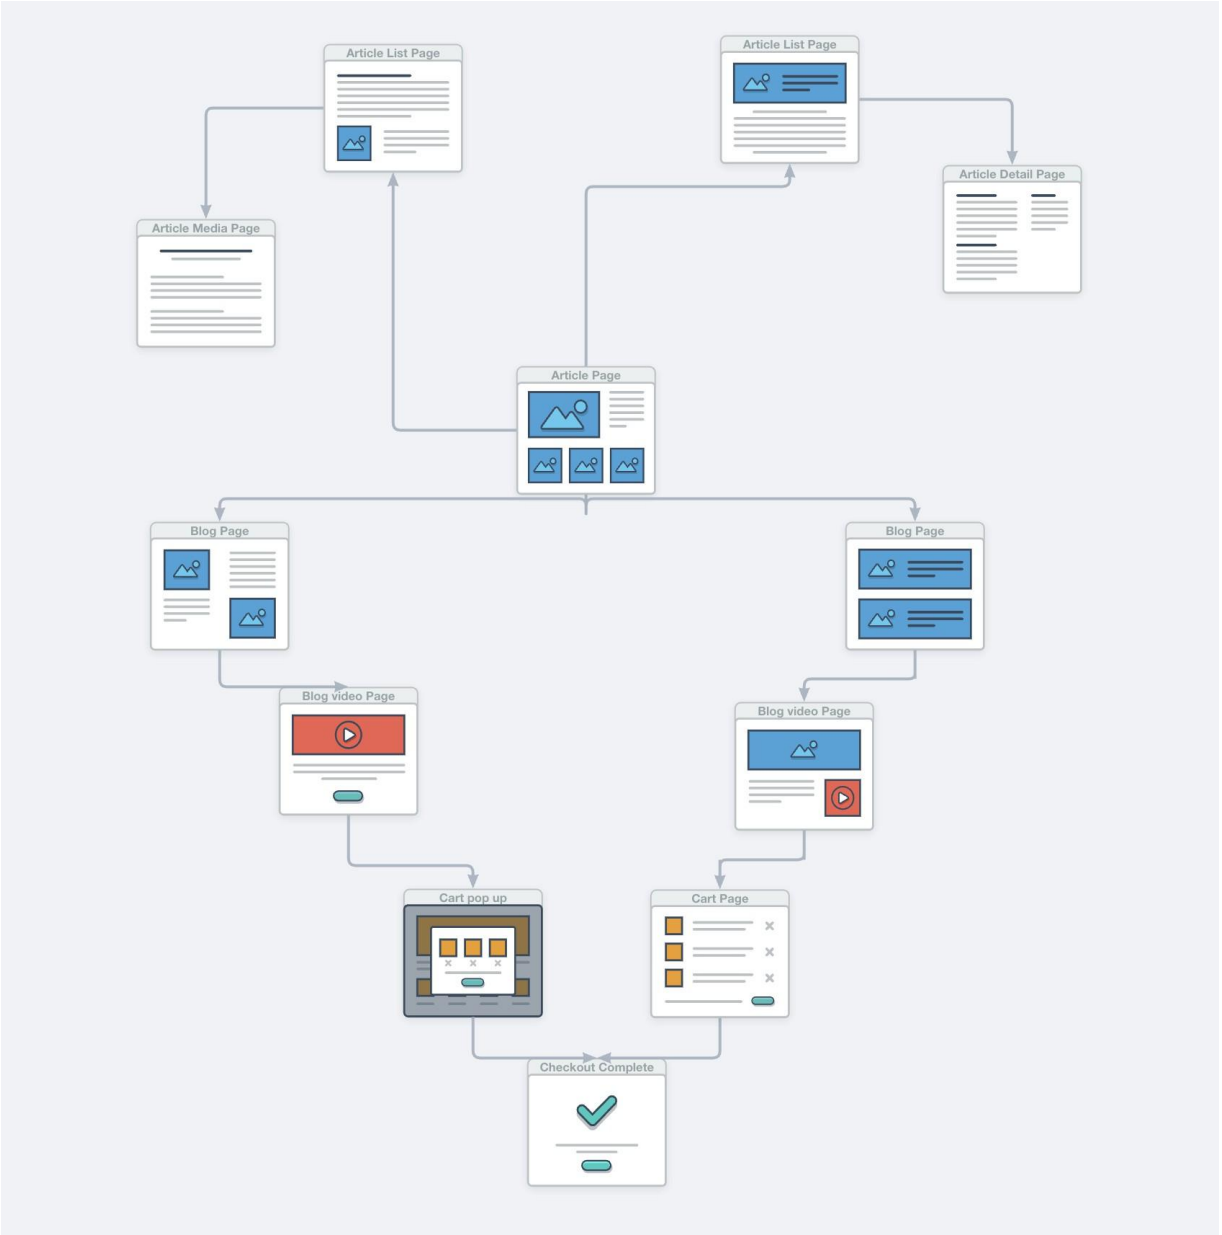
- Designed a confirmation screen indicating successful completion of the process.

Step 4: Linking Screens (Wireflow)

- Connected all screens using directional arrows to show user navigation:
  - Article List Page → Article Media Page
  - Article List Page → Article Detail Page
  - Article Page → Blog Page
  - Blog Page → Blog Video Page
  - Blog Video Page → Cart Pop-up / Cart Page
  - Cart → Checkout Complete
- Ensured smooth and meaningful transitions between all screens.

RESULT:

A wireflow prototype was successfully created that illustrates the complete navigation flow from browsing articles and blogs to interacting with video content and completing a checkout process.



Conclusion:

The wireflow prototype effectively demonstrates a structured and user-friendly navigation system. It shows how users can move seamlessly from content exploration (articles and blogs) to transactional actions (cart and checkout), providing a clear understanding of the overall application flow.
